

ENERGY POLICY

FORNETTI Kft. and Fornetti Romania S.R.L. (FORNETTI) are engaged in the production and sale of frozen bakery products, which involves significant energy consumption.

As part of FORNETTI, we consider it essential to conduct our operations transparently, taking into account energy and environmental considerations, optimizing energy costs, and thereby reducing our environmental impact while improving energy efficiency wherever possible.

In line with the above, our energy management activities and energy policy guidelines are as follows:

- We identify key energy-consuming areas, technologies, and processes that determine our energy usage, as well as those with significant potential for energy savings.
- In the production of our goods, we design, implement, and operate technologies with energy efficiency in mind. The same approach applies when introducing new technologies, operating them, and setting procurement conditions.
- We develop energy performance indicators, which we regularly monitor and improve where possible.
- We are committed to complying with legal and regulatory requirements related to energy efficiency, energy use, and consumption, as well as meeting our voluntary commitments.
- We operate an Energy Management Team to ensure that representatives from key energy-consuming areas participate in developing and implementing measures to improve energy efficiency.
- We continuously train, encourage, and support our employees to align their activities with our energy policy and objectives, enhance their energy awareness, and actively contribute to improving energy efficiency.
- We consider it an advantage if our suppliers and partners have an energy management system and/or energy-saving models and are familiar with our energy policy, thereby promoting energy-conscious thinking.
- We set goals and programs to optimize electricity consumption, fuel usage in our vehicle fleet, and natural gas consumption. To achieve these, we provide the necessary resources and information.
- We annually review the implementation of the guidelines set out in our energy policy within the applicable scope and address any non-conformities with corrective actions, ensuring continuous improvement.
- We make our energy policy available to stakeholders upon request.

To implement the above and fulfill the legal requirements for energy auditing, FORNETTI Kft. has developed, implemented, and operates an energy management system in compliance with the EN ISO 50001:2018 standard, which is certified by an accredited third party. FORNETTI ensures the necessary resources for the operation and continuous improvement of the system through its management.
